

MIDTERM EXAMINATION – Code 1

Course: Database Design, Management, and Administration

Code: MSIS4013.P23.CTTT

Term: 2 – Academic year: 2024-2025

Time: 80 minutes

Lecturer (s): Cao Thi Nhan

Student name:

Student ID:

(Notes: Paper documents are allowed)

Question 1 (2.0 points)

Given a relational database schema of the “*English debate contest*” as follows:

SEASON (SeasonID, SeasonName, MainTopic, StartDate, EndDate, Fee)

Each season has a unique ID (SeasonID) to differ from other seasons, season name, main topic, start date, end date, and fee for one team.

TEAM (TeamID, TeamName, SeasonID)

Each team has a unique ID (TeamID) to differ from other teams, team name, and register for a season.

MEMBER (MemberID, Name, Birthday, Gender, Address, Phone, Email)

Each member has a unique ID (MemberID) to differ from other members, name, birthday, gender, address, phone, and email.

TeamMember (TeamID, MemberID, Role)

A member of a team has a main role (including first speaker, second speaker, or third speaker).

ROUND (RoundID, SubTopic)

Each round has a unique ID (RoundID) to differ from other rounds, and subtopic.

RoundResult (RoundID, TeamID, Score, Result)

The results of each team's competition are recorded through each round, including score and result (win or lose)

Using SQL to answer these questions:

1. Show list of members who have the role of “First speaker”. The result shows MemberID, TeamID, TeamName, and SeasonID (1.0 point)
2. List the teams that participated in both rounds with RoundID “R_01” and “R_02”. The result shows TeamID, TeamName, RoundID, Score, and Result (1.0 point)

Question 2 (2.0 points)

In your opinion, is the relation good? Why? Show your improvement (if any).

CourseOffering (CourseID, CourseName, Credits, Semester, AcademicYear, FacultyID, FacultyName, DeanOfFaculty).

Question 3 (6.0 points)

Based on the relational database schema of the “*English debate contest*” in the Question 1, use PL/SQL to:

1. Create a block to find and display member’s information of the member having the memberID= ‘M_1’.

Note: including exception part.

2. Create a block to show information about teams of each season. The information including SeasonID, SeasonName, MainTopic, TeamID, TeamName.

Note: including exception part.

-----next week-----

3. Create a block to find and show team members information based on TeamID. Requirements are:
 - Information including Team name, MemberID, Name, Gender, and Role.
 - If input teamID does not exist, display message “The TeamID does not exist. Please input other value.”
 - *Note: Use TeamID as a parameter of a cursor*

-----END-----
