

Class PrintCalendar

java.lang.Object[↗]
PrintCalendar

```
public class PrintCalendar
extends Object↗
```

Constructor Summary

Constructors

Constructor	Description
<code>PrintCalendar()</code>	

Method Summary

All Methods

Static Methods

Concrete Methods

Modifier and Type	Method	Description
static <code>String</code> [↗]	<code>getMonthName(int month)</code>	Get the English name for the month
static int	<code>getNumberOfDaysInMonth(int year, int month)</code>	Get the number of days in a month
static int	<code>getStartDay(int year, int month)</code>	Get the start day of month/1/year
static int	<code>getStartDayV2(int year, int month)</code>	Return the day of the week for the first day of a specific Year and Month
static int	<code>getTotalNumberOfDays(int year, int month)</code>	Get the total number of days since January 1, 1800
static int	<code>getTotalNumberOfDaysV2(int year, int month)</code>	Get the total number of days since January 1, 1970
static boolean	<code>isLeapYear(int year)</code>	Determine if it is a leap year
static void	<code>main(String[↗][] args)</code>	Main method
static void	<code>printMonth(int year, int month)</code>	Print the calendar for a month in a year

static void	printMonthBody (int year, int month)	Print month body
-------------	--	------------------

static void	printMonthTitle (int year, int month)	Print the month title, e.g., May, 1999
-------------	---	--

Constructor Details

PrintCalendar

```
public PrintCalendar()
```

Method Details

main

```
public static void main(String[] args)
```

Main method

printMonth

```
public static void printMonth(int year,  
                             int month)
```

Print the calendar for a month in a year

Parameters:

year - the year of the month to be printed

month - the month to be printed

printMonthTitle

```
public static void printMonthTitle(int year,  
                                   int month)
```

Print the month title, e.g., May, 1999

Parameters:

year - the year of the month to be printed

month - the month to be printed

getMonthName

```
public static String↗ getMonthName(int month)
```

Get the English name for the month

printMonthBody

```
public static void printMonthBody(int year,  
                                  int month)
```

Print month body

getStartDayV2

```
public static int getStartDayV2(int year,  
                                int month)
```

Return the day of the week for the first day of a specific Year and Month

Parameters:

year -

month -

Returns:

the day of the week: Sun as 0, Mon as 1, Tue as 2, ..., Sat as 6

getStartDay

```
public static int getStartDay(int year,  
                              int month)
```

Get the start day of month/1/year

getTotalNumberOfDays

```
public static int getTotalNumberOfDays(int year,  
                                       int month)
```

Get the total number of days since January 1, 1800

getTotalNumberOfDaysV2

```
public static int getTotalNumberOfDaysV2(int year,  
                                         int month)
```

Get the total number of days since January 1, 1970

Parameters:

year - the year of the month to count

month - the month to count

Returns:

the number of days since Jan 1st, 1970

getNumberOfDaysInMonth

```
public static int getNumberOfDaysInMonth(int year,  
                                         int month)
```

Get the number of days in a month

isLeapYear

```
public static boolean isLeapYear(int year)
```

Determine if it is a leap year

Parameters:

year - the year to check if it is a leap year

Returns:

true if it is a leap year, false otherwise
