

**I. MULTIPLE-CHOICE QUESTIONS (6 marks, 0.3 marks per question, students choose the best result to fill it for THE ANSWER TABLE OF MULTIPLE-CHOICE TEST)**

---

**Question 1** What is the function of SAP ERP? (G1)

|    |                                                                                       |
|----|---------------------------------------------------------------------------------------|
| A. | Enables a company to support and optimse its business process.                        |
| B. | Helps the organization run smoothly.                                                  |
| C. | Real-time environment, scalablen and flexible.                                        |
| D. | Collections of logically related transactions within identifiable business functions. |
| E. | <b>All of the above.</b>                                                              |

**Question 2** What role does S/4 HANA play within an organization's digital strategy? (G1)

|    |                                                                                         |
|----|-----------------------------------------------------------------------------------------|
| A. | S/4 HANA is primarily used for customer relationship management.                        |
| B. | S/4 HANA serves as a cloud storage solution for data backups.                           |
| C. | S/4 HANA is an analytics tool for market research.                                      |
| D. | <b>S/4 HANA is the digital core of the company that enables digital transformation.</b> |
| E. | S/4 HANA is a virtual reality platform for employee training.                           |

**Question 3** What does the solution map of SAP ERP represent? (G1)

|    |                                                                            |
|----|----------------------------------------------------------------------------|
| A. | <b>A visualization that summarizes the key areas supported by SAP ERP.</b> |
| B. | A diagram denotes the architecture of SAP ERP servers.                     |
| C. | A chart gives out the financial performance of SAP ERP clients.            |
| D. | A map shows the geographical locations of SAP ERP users.                   |
| E. | A graph indicates the growth trajectory of SAP ERP installations.          |

**Question 4** What characterizes the three-tier client-server system architecture? (G1)

|    |                                                                                                                         |
|----|-------------------------------------------------------------------------------------------------------------------------|
| A. | It consists of three separate physical servers located in different geographical locations.                             |
| B. | <b>It features an intermediary level, dividing the architecture into a client, application server, and data server.</b> |
| C. | It involves three levels of communication protocols for data transfer.                                                  |
| D. | It relies on three different programming languages for client, application server, and data server.                     |
| E. | It requires three layers of encryption for secure communication between client and server.                              |

**Question 5** What deployment options are available for SAP S/4HANA? (G1)

|    |                                 |
|----|---------------------------------|
| A. | Cloud.                          |
| B. | On-Premises.                    |
| C. | <b>Cloud and On-Premises.</b>   |
| D. | Public Cloud and Private Cloud. |
| E. | Managed Services.               |

**Question 6** How many key steps are there in the sales order process? (G2)

|    |          |
|----|----------|
| A. | 5        |
| B. | 6        |
| C. | 7        |
| D. | <b>8</b> |
| E. | 9        |

**Question 7** What is an inquiry in pre-sales documents? (G2)

|    |                                                                                                   |
|----|---------------------------------------------------------------------------------------------------|
| A. | A confirmed order for products or services.                                                       |
| B. | A formal payment request.                                                                         |
| C. | <b><u>Customer requests product or service info or quote without obligation for purchase.</u></b> |
| D. | A contract outlining terms and conditions of sale.                                                |
| E. | A report detailing sales performance and revenue projections.                                     |

**Question 8** What is the purpose of a quotation in pre-sales documents? (G2)

|    |                                                                          |
|----|--------------------------------------------------------------------------|
| A. | <b><u>Offers specific products or selections with legal binding.</u></b> |
| B. | Provides feedback on customer satisfaction.                              |
| C. | Requests payment for products or services.                               |
| D. | Tracks inventory levels and stock movements.                             |
| E. | None of the above.                                                       |

**Question 9** Which process ensures that products are in stock to fulfill the sales order? (G2)

|    |                                   |
|----|-----------------------------------|
| A. | Quality assurance.                |
| B. | <b><u>Availability check.</u></b> |
| C. | Market research.                  |
| D. | Employee training.                |
| E. | Customer feedback.                |

**Question 10** How many key steps are there in the procure-to-pay process? (G2)

|    |                 |
|----|-----------------|
| A. | 4               |
| B. | 5               |
| C. | 6               |
| D. | <b><u>7</u></b> |
| E. | 8               |

**Question 11** What must a person determine when creating a purchasing requisition manually? (G2)

|    |                                                  |
|----|--------------------------------------------------|
| A. | Where to store the items.                        |
| B. | <b><u>What, how much, and when to order.</u></b> |
| C. | Supplier preferences.                            |
| D. | Budget allocation.                               |
| E. | Shipping methods.                                |

**Question 12** Which process involves asking suppliers to provide their price for the requested materials or services? (G2)

|    |                                            |
|----|--------------------------------------------|
| A. | Source List.                               |
| B. | Outlined Agreement.                        |
| C. | <b><u>Request for Quotation (RFQ).</u></b> |
| D. | Internal Sourcing Requirements.            |
| E. | Inventory check.                           |

**Question 13** What is the primary purpose of a materials requirement planning (MRP) system? (G2)

|    |                                                                                                                                            |
|----|--------------------------------------------------------------------------------------------------------------------------------------------|
| A. | <b><u>To identify necessary materials, estimate quantities, determine when materials will be required, and manage delivery timing.</u></b> |
| B. | To reduce overall production costs by eliminating the need for inventory management.                                                       |
| C. | To monitor employee performance and improve workplace efficiency.                                                                          |
| D. | To automate the entire manufacturing process without human intervention.                                                                   |

|    |                                                             |
|----|-------------------------------------------------------------|
| E. | To manage customer relations and improve sales performance. |
|----|-------------------------------------------------------------|

**Question 14** What is a key characteristic of multilevel bills of materials (BOM) compared to single-level bills of materials (BOM)? (G2)

|    |                                                                                       |
|----|---------------------------------------------------------------------------------------|
| A. | They focus only on the final assembly of the product.                                 |
| B. | They are organized as graphical diagrams.                                             |
| C. | They exclude lower-level parts from the list.                                         |
| D. | They are used solely for cost estimation.                                             |
| E. | <b>They expand the higher-level part down to all levels of the product structure.</b> |

**Question 15** What types of master data for manufacturing resource planning (MRP II) are included? (G2)

|    |                                    |
|----|------------------------------------|
| A. | Routings and operating facilities. |
| B. | Factory calendars and shift mode.  |
| C. | Tools and employees.               |
| D. | <b>All of the above.</b>           |
| E. | None of the above.                 |

**Question 16** What fundamental equation must a balance sheet always satisfy? (G2)

|    |                                               |
|----|-----------------------------------------------|
| A. | <b>Assets = Liabilities + Owners' equity.</b> |
| B. | Assets = Revenues - Expenses.                 |
| C. | Assets = Liabilities - Owners' equity.        |
| D. | Assets + Liabilities = Owners' equity.        |
| E. | Liabilities = Assets + Owners' equity.        |

**Question 17** What do the standard reports of financial accounting (FI) include? (G2)

|    |                          |
|----|--------------------------|
| A. | Balance sheet.           |
| B. | Income statement.        |
| C. | Cash-flow statement.     |
| D. | <b>All of the above.</b> |
| E. | None of the above.       |

**Question 18** How are customer and vendor account balances maintained in financial accounting (FI)? (G2)

|    |                                                                                   |
|----|-----------------------------------------------------------------------------------|
| A. | Through manual entry in a spreadsheet.                                            |
| B. | <b>Use fully integrated accounts receivable and accounts payable sub-ledgers.</b> |
| C. | By external auditors only.                                                        |
| D. | Through monthly paper statements.                                                 |
| E. | Use a separate, non-integrated system.                                            |

**Question 19** What are the three parts of the human capital management (HCM) organizational structure? (G2)

|    |                                                                        |
|----|------------------------------------------------------------------------|
| A. | Financial structure, marketing plan, IT infrastructure.                |
| B. | Sales strategy, customer service plan, product development.            |
| C. | <b>Enterprise structure, personnel structure, organizational plan.</b> |
| D. | Budget plan, resource allocation, risk management.                     |
| E. | Training programs, employee benefits, performance metrics.             |

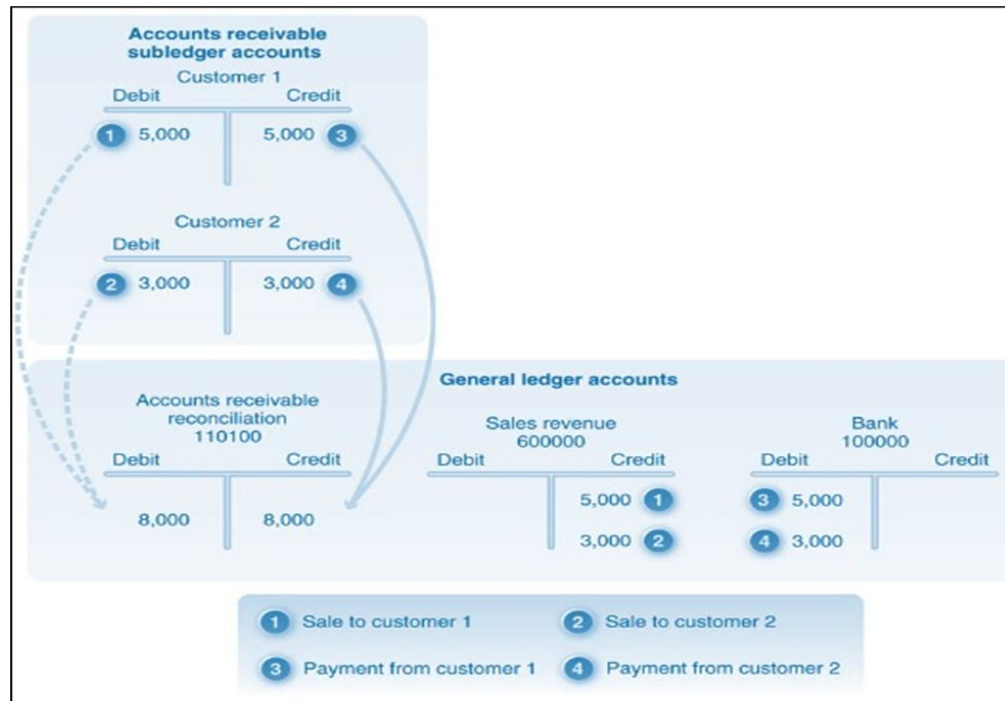

**Question 20** What role does the personnel number play in SAP's human capital management system? (G2)

|    |                                                                 |
|----|-----------------------------------------------------------------|
| A. | It is used to generate payroll reports.                         |
| B. | It controls access to the company's network.                    |
| C. | It tracks employee performance reviews.                         |
| D. | It schedules employee shifts.                                   |
| E. | <b>It identifies all employee data available in the system.</b> |

## II. ESSAY QUESTIONS (4 marks)

### Question 1 (2 marks) (G1, G2, G3)

Given the diagram shown below, analyze and interpret its information flow.

### Question 2 (2 marks) (G1, G2, G3)

After completing the enterprise resource planning course, analyze and indicate the benefits of using the SAP S/4 HANA platform within an enterprise environment.

## 2. ESSAY QUESTIONS (4 MARKS)

### Question 1 (2 marks): Analysis and Interpretation of the Information Flow Diagram

#### 1. Overview of the Architecture

The given diagram illustrates the real-time operational alignment and tight integration between SAP Financial Accounting (FI) **Sub-ledgers** (specifically, Accounts Receivable sub-ledger accounts for distinct customers) and the **General Ledger (G/L)** through a specific **Reconciliation Account (110100)**. This setup guarantees that individual transactions automatically synchronize to keep financial ledgers balanced and structurally consistent.

#### 2. Detailed Transaction Processing and Postings

The underlying transaction cycle executes in the following granular steps:

##### Step 1: Sale to Customer 1 (\$5,000)

- **Subledger Posting:** Customer 1 account is **Debited** by \$5,000, registering an increase in receivables due from this customer.
- **General Ledger Synchrony:** Simultaneously, a **Credit** of \$5,000 is recognized under the *Sales Revenue Account (600000)*. Automatically, the system creates an integrated offset by **Debiting** \$5,000 into the *Accounts Receivable Reconciliation Account (110100)*.

##### Step 2: Sale to Customer 2 (\$3,000)

- **Subledger Posting:** Customer 2 account is **Debited** by \$3,000.
- **General Ledger Synchrony:** The *Sales Revenue Account (600000)* is **Credited** by \$3,000, and the parallel tracking *Accounts Receivable Reconciliation Account (110100)* is **Debited** by \$3,000.
- *Interim Balance Verification:* Total subledger receivables equal  $\$5,000 + \$3,000 = \$8,000$ , matches exactly with the current Debit total sitting on G/L Reconciliation Account 110100.

##### Step 3: Payment from Customer 1 (\$5,000)

- **Subledger Posting:** Customer 1 account is **Credited** by \$5,000, clearing the customer's open line item liability.
- **General Ledger Synchrony:** Real liquid funds are recorded via a **Debit** of \$5,000 into the *Bank Account (100000)*. Concurrently, the system triggers an automatic offset by **Crediting** \$5,000 to the *Accounts Receivable Reconciliation Account (110100)*.

##### Step 4: Payment from Customer 2 (\$3,000)

- **Subledger Posting:** Customer 2 account is **Credited** by \$3,000, clearing their balance.
- **General Ledger Synchrony:** The *Bank Account (100000)* is **Debited** by \$3,000, while the *Accounts Receivable Reconciliation Account (110100)* gets updated with an automated offset **Credit** of \$3,000.

### 3. Structural Conclusion

The diagram visually confirms the elimination of traditional manual double-entries. Any transactional activity posting to distinct client sub-ledgers directly reflects in real-time inside the parent General Ledger via reconciliation account pathways, guaranteeing end-to-end ledger integrity where total Debits balance total Credits (\$8,000 = \$8,000).

---

### Question 2 (2 marks): Strategic and Functional Benefits of Utilizing the SAP S/4HANA Platform

Implementing the SAP S/4HANA platform within a modern enterprise introduces key architectural, operational, and strategic business values:

#### 1. Real-Time Processing with In-Memory Database Architecture (HANA)

SAP S/4HANA runs entirely on an advanced in-memory database system, meaning data is pulled directly from random-access memory (RAM) instead of legacy mechanical storage disks. This architecture allows companies to run fast real-time data calculations, complete end-of-month financial closings in minutes instead of days, and respond immediately to fluctuating supply chain disruptions.

#### 2. Modernized and Unified User Experience via SAP Fiori

S/4HANA abandons text-heavy, complicated menu structures in favor of an intuitive, role-based user experience built via SAP Fiori. Fiori apps scale seamlessly across mobile devices, tablets, and web browsers, reducing employee learning-curves, speeding up daily processing workflows, and lowering internal support overheads.

#### 3. Radical Data Architecture Simplification

The system removes old-style database aggregate tables, indices, and redundant calculation layers. By maintaining a single source of truth, it shrinks the physical data footprint of an enterprise dramatically. This results in optimized hardware maintenance costs and faster transaction throughput.

#### 4. Native Advanced Analytics and Intelligent Process Automation

Embedded directly into the system core are tools for Machine Learning, Predictive AI, and Robotic Process Automation (RPA). This enables automated stock forecasting, predictive material requirements planning (pMRP), and auto-matching of modern invoices, allowing managers to transition from manual operations to data-driven decision-making.

#### 5. Deployment Versatility and Agile Business Scaling

S/4HANA supports diverse delivery paths tailored to enterprise requirements, including on-premises, public cloud, private cloud, or hybrid combinations. This architectural elasticity gives organizations the structural freedom to scale operational capacities across new global markets or quickly deploy fresh functional models when needed.
